Reply to Office Action of May 7, 2003

Docket No. K-0348

Amendments to Abstract

Please replace the Abstract with the following amended Abstract.

~~Device~~ A device and method for processing a PIP (picture in picture) in a TV, in which a PIP is overlaid on a main picture, ~~to permit watching thus allowing a user to watch~~ the PIP as well as the main picture even in a region of the PIP [[on]] at the same time, ~~the device including~~ The device includes a first video processing part for receiving, and processing a main picture video signal into a signal displayable on a screen, a second video processing part for receiving, and processing a sub picture video signal into a signal displayable on a region of the screen, a control part for providing a control signal according to a users command, and an adjusting part for adjusting a presenting ratio of a video signal from the second video processing part for adjusting a presenting ratio of a video signal from the second video processing part in response to the control signal from the control part, thereby permitting a user to watch the main picture even in the sub picture because a mix ratio adjustment of the main picture and the sub picture are possible, and to watch a good quality main, and sub pictures because the mix ratio of the main picture and the sub picture can be adjusted appropriately.
